ENSURE ALL SCREWS ARE TIGHTENED SECURELY BUT DO NOT
FORCE THEM.AFTER THE MORTAR OR WHITE CEMENT HAS SET,
FINISH SCREWING THE CERAMIC PRODUCT IN PLACE

Consigli per la pulizia :

per la pulizia dei nostri prodotti si consigliano detersivi specifici , e normalmente in commercio, per la pulizia delle superfici in ceramica, astenersi dall'uso di prodotti non testati e non consigliati per ceramica quali acidi, prodotti abrasivi e o corrosivi.

E' buona norma, e consigliabile, asciugare le parti in ceramica dopo averle lavate onde evitare il formarsi di macchie di calcare antiestetiche, non imputabili, come difetto intrinseco, alla ceramica.

Cleaning advice

To clean our products we suggest widely available detergents specifically designed to clean ceramic surfaces.

Do not use products which have not been tested and have not been recommended to use on ceramics, such as acids, corrosive and abrasive products.

These will likely damage the washbasin.

It is good practice to dry the ceramic parts after having washed them in order to avoid the development of unsightly limestone deposits. Such deposits are likely if the washbasin is not properly cleaned and maintained.
